Russia

Country/Region	General measures	Measures for construction	
RUSSIA			
Lockdown	A report from the Eastern European Construction Forecasting Association (EECFA) has revealed that, as confirmed cases of the Covid-19 virus soar, the government is insistent that construction projects remain on track. Only projects in Moscow and the Moscow region have been curtailed, where the largest number of virus cases have been recorded. EECFA reports that the construction industry is likely to be one of the hardest hit, with social distancing on construction sites extremely difficult to maintain. The Ministry of Construction is under pressure to develop an anti-crisis program for the industry, set to include subsidizing interest rates on mortgage loans to support demand for property, as well as credit and tax moratorium for developers and measures to reduce the cost of project financing. According to EEFCA, the government has also been considering the possibility of having state-owned companies purchase unsold apartments from		
	developers. Furthermore, until January 1, 2021 housing developers will not face punitive action, should the completion of residential building project be delayed. In non-residential and civil engineering segments, as support measures, the Ministry plans to increase several government contracts and lift advances on those contracts from 30% to 50% (cf. Construction Europe) (5 May).		
Economic outlook	According to the European Bank for Reconstruction and Development (EBRD), Russia is set to record negative GDP growth of 4.5% in 2020 following the shocks caused by the coronavirus pandemic and the collapse of the OPEC+ agreement to limit oil production (13 May).	Russia's construction sector has suffered as a result of the Covid-19 outbreak, with several major projects mothballed or cancelled. Consequently, the Russian construction industry's output is expected to contract by 3.8% in 2020, a significant downward revision from the 2.6% growth previously forecast by GlobalData.	
	The introduction of the National Plan for Economic Recovery has helped mitigate some of the negative effects. A rebound of 3.0% is	According to GlobalData analysts, the economic conditions have worsened in Russia with market consensus expecting the Russian economy to contract by 4% in 2020 (13 October).	

Since March 25, 2020

expected in 2021, conditional on some recovery in oil prices (cf.	The Eastern European Construction Forecasting Association (EECFA) forecasts a
